

TRANSCRIPT OF STUDIES

This document certifies that Illya Cherepanov [REDACTED] has completed the following academic modules. Studies commenced **29.09.2025**.

The student has successfully completed all mandatory projects in the program.

Coding Fundamentals Java

130 h

Hours*

100%

Completion rate*

04.11.2025

Date

This module develops backend programming skills through Java and object-oriented design principles, covering command-line interfaces, file operations, data parsing, web applications, API development, and relational databases. Projects apply OOP patterns to data processing and database-driven systems. The student collaborated* with **12 fellow students** throughout this module.

Project*	Hours	Completion rate*	Date
Itinerary	60 h	100%	18.10.2025
KMDB	70 h	100%	04.11.2025

TRANSCRIPT OF STUDIES

Student: Illya Cherepanov | [REDACTED] | Start: 29.09.2025.

Application Development

605 h

Hours*

100%

Completion rate*

04.08.2026

Date

This module covers modern full-stack development, equipping students with a comprehensive skill set in JavaScript, TypeScript, and React. It includes implementing secure authentication, GraphQL APIs, event-driven updates, and automated testing. Projects involve real-time communication systems, recommendation engines, and custom frontend frameworks, requiring practical application of database design, performance optimization, and system scalability principles. The student collaborated* with **24 fellow students** throughout this module.

Project*	Hours	Completion rate*	Date
hello-js	15 h	100%	03.01.2026
real-js	15 h	100%	21.01.2026
browser-js	20 h	100%	02.02.2026
racetrack	225 h	100%	19.03.2026
TypeScript Sprint	15 h	100%	24.03.2026
match-me	200 h	100%	23.07.2026
dot-js	55 h	100%	29.07.2026
web-game	60 h	100%	04.08.2026

TRANSCRIPT OF STUDIES

Student: Illya Cherepanov | [REDACTED] | Start: 29.09.2025.

Mobile App Development

425 h

Hours*

100%

Completion rate*

05.10.2026

Date

This module develops cross-platform mobile applications using Flutter for iOS, Android, and web deployment. Projects cover custom interface design with canvas rendering, local data persistence with encryption, real-time communication using WebSockets, multiplayer game architecture, device sensor integration, and high-frequency data stream processing. Work emphasizes state management patterns, performance optimization for real-time rendering, gesture handling, and platform-specific adaptations. The student collaborated* with **13 fellow students** throughout this module.

Project*	Hours	Completion rate*	Date
Literal Maintainer	115 h	100%	22.08.2026
Boredom	140 h	100%	18.09.2026
Artist	35 h	100%	24.09.2026
Comms	80 h	100%	05.10.2026
Marathon	55 h	100%	03.10.2026

Hours* - estimated amount of time the student spent completing the topic.

Completion rate* - measured in %. Indicates completion rate rather than academic quality. 100 % = All mandatory and optional activities completed.

Project* - a component of a module with a dedicated topic; it commonly includes subprojects.

Collaboration* - collaboration reflects work performed with other students through team projects, pair programming, peer reviews, and peer-to-peer learning.
